

The Dazzling Dragonfly

A Spectacular Sculpture!

Here is another sculpture Kit you can have sent directly to your computer, and you will not even need a *Bodiform* to build it! You do the work right on your worktable, just like traditional stained glass. The *Dazzling Dragonfly* will immediately become the talk of your social and stained glass circles!

In addition to the sparkling wings, the size is also impressive. The wings measure nineteen inches across, and the body is twelve inches long. The *Dazzling Dragonfly* weighs about three pounds. What gives the wings their dazzling appearance? Let me show you:

You crinkle up some ordinary aluminum foil.

You sandwich the aluminum foil between two same-size wings.

The crinkled foil shows through the transparent colored glass.

It is a rather simple process, but very effective. You just have to make sure that you make the wings exactly the same size. You can choose whatever colors you wish, either glass you have on hand, or glass to suit your own artistic inclination. We used six different colors (that we had on hand), and we were very satisfied with the results. The pattern sheets indicate six different colors, pretty much the same as we used, but you can change them as it pleases you. You will be very pleased with the Instruction Manual, and you'll be even more pleased at the low cost of the eKit.
